

WithSecure[™] Elements XDR Cloud Security

Don't let cloud attacks stop you.

Detect and prevent cloud data breaches

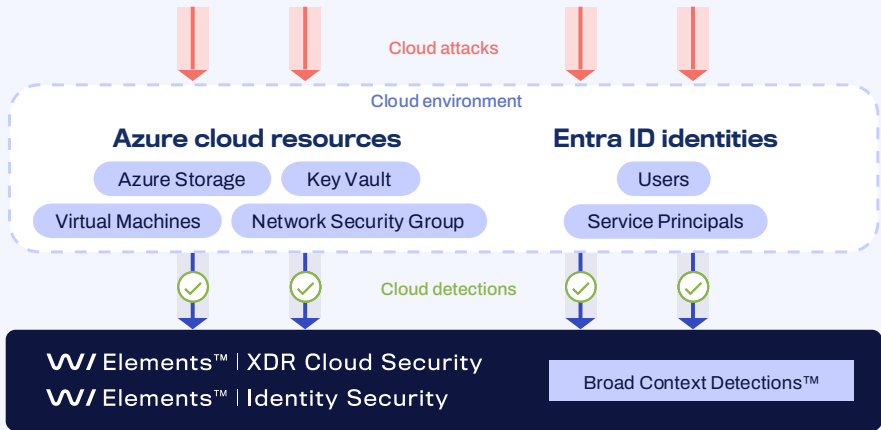

Cloud environment adoption introduces an additional and often complex attack surface, presenting the risk of attack types like data breaches, abuse of resources, and ransomware. When it comes to security in the cloud, data protection is up to you, as most vendors have a shared responsibility model for the cloud infrastructure.

Whereas large enterprises often have dedicated cloud security teams to manage complex tools, mid-size organizations typically rely on IT or security generalists to handle cloud security. Due to this cloud skills gap, many cloud security tools that are currently available on the market produce too much work.

WithSecure[™] Elements Extended Detection and Response (XDR) Cloud Security provides easy-to-understand cloud detections with AI-powered recommendations. The solution empowers security analysts to quickly learn cloud tooling for the most important use case: taking quick action to mitigate cloud threats. XDR Cloud Security provides threat research-based detection for your Azure cloud environment, helping secure your resources. It is an easy-to-use solution that supports your cloud transformation from on-premise to hybrid setups mixing cloud and on-premise environments. It helps mitigate threats to your critical company data in the cloud and secures your seamless cloud-based service delivery.

Empower your XDR with Cloud Security for Azure

WithSecure™ Elements XDR Cloud Security for Azure produces Broad Context Detections™ that combine suspicious Azure cloud events and Entra ID identity related threat signals from WithSecure™ Elements Identity Security to form the full picture of a cloud attack.

Data is the new gold, keep yours secure in the cloud: Minimize financial losses due to data breaches and keep your cloud infrastructure operational against attacks with reduced business risk, continued service availability, and minimized operational downtime – thanks to cutting-edge threat research-based cloud detections.

Intelligent threat detection for the Cloud Era: Enable your cloud transformation by securing cloud resources, thus ensuring your critical company data is being kept safe when moving to the cloud or using hybrid setups combining cloud with on-premise.

Cloud Security redefined – detect and remediate with AI: Respond to cloud detections quickly with Luminen™ GenAI assistant that helps save time and effort by explaining cloud incidents and providing recommendations on how to respond.

The simplest way to guard your cloud: See the whole cloud attack chain effortlessly, as the solution aggregates events from multiple data sources (Entra ID and Azure) into one Broad Context Detection™ view, massively speeding up security analysis time when mitigating risks.
